Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9 April 2008 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 67 and 74 are rejected under 35 U.S.C. 102(b) as being anticipated by Later (US 5,259,962).

Later teaches a method of decontaminating the surface of a contaminated object (particulate materials). The method of Later includes providing a barrier **20** that defines a treatment space having an entrance **30** and an exit (exit from barrier to auger **34**)

for the object to enter and exit the barrier. The method further includes moving the contaminated object into the barrier using auger **16**, spraying hydrogen peroxide through inlet **28** onto the surfaces of the object and illuminating the sprayed surfaces with UV light **22**. Moreover, an air flow is established by fan **50** to flow from the exit of barrier **20** to the entrance **30** and out air return line **70**. The contaminated object is removed from the barrier after treatment by auger **34**. See col.3, lines 42-44; col.5, lines 11-15; col.5, line 67 to col.6, line 2.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claim 68 is rejected under 35 U.S.C. 103(a) as being unpatentable over Later in view of Gonzalez-Martin et al. (US 6,117,337).

Later discloses that a wavelength of less than 400 nm should be used (col.3, lines 38-39) but does not specify a range of 200-320 nm. Gonzalez-Martin et al. discloses a method of oxidizing organic contaminants using hydrogen peroxide and UV radiation wherein the UV has a wavelength of below 300 nm, preferably 220-280 nm. See col.3, lines 64-66. As Gonzalez-Martin et al. evidences that these wavelengths are effective in the oxidation of organics, it would have been obvious to choose wavelengths below 300 nm in the method of Later.

Allowable Subject Matter

6. Claims 59-66 and 69-73 are allowed.

Response to Arguments

7. Applicant's arguments with respect to claims 67 and 68 have been considered but are moot in view of the new ground(s) of rejection.
